

BLENDED INTENSIVE PROGRAMM

- Carinthia University of Applied Sciences, Austria
- Karelia University of Applied Sciences, Finland
- Technische Universität Darmstadt, Germany

2. - 27. October 2023

Diversity in a digitized world -
 challenges and opportunities for (re-)establishing social justice

Diversity, Digitalization and Social Justice

Programm:

Week 1:	2. – 6. October 2023 Kick-Off Workshop: 2 nd October 2023, 5 p.m. (CET) Online and synchronous via MS Teams	Introduction and Virtual Team Building
Week 2:	9. – 13. October 2023	Phenomenon-based learning in the context of diversity in a digitized world
Week 3:	16. – 20. October 2023	Diversity in a digitized world: What future visions could be created?
Week 4:	23. – 27. October 2023	Intensive Week @ CUAS (Klagenfurt, Carinthia): Visions, technologies, experimentation and critical reflections – challenges and opportunities for (re-)establishing social justice

Objective and Description:

The objectives of the BIP are for students to work internationally in inter- and transdisciplinary teams on the one hand, and to acquire multi-professional perspectives on the other. The thematic framework for this is provided by the content of the BIP, which is about critically reflecting on diversity in the digitalised world in order to discuss, in a further step, the challenges and possibilities that can contribute to the (re)establishing of social justice through digitalisation. Phenomenon-based learning enables students to get to the bottom of a phenomenon and stimulate a group process. The aim is to develop a vision of how social justice can be achieved through digitalisation, based on the students personal interest in knowledge. The focus is on connecting their own experiential knowledge with

scientific findings and thus reaching a critical level of reflection. The teachers of the BIP see themselves as mentors who accompany the learning process of the students, provide professional input, establish connections and offer the framework so that group processes can develop. The aim of the on-site Intensive Week is to give students the opportunity to work in an international setting after the online exchange, to get to know each other in person and to deepen their group visions. Experimentation with various technological systems stimulates phenomenon-based (experiential) learning. At the same time, the communication skills and intercultural competences of the students are trained and strengthened.
